Biopton Light Therapy is a medical light therapy system with full EU medical approval. It is used with success in various hospitals and clinics throughout the world for healing. Biopton uses the full colour spectrum of natural daylight (with NO ultraviolet rays). All UVB and UVA rays are filtered out. Biopton is completely safe and has no side effects. It must not be confused with the inexpensive light boxes which are commonly used for the treatment for SAD; Biopton is a completely different treatment.

Extensive research has shown that light in this form provides a strong and direct stimulus for the regenerative processes, because there is no UV emission from the light, there is no tanning or burning of the skin during treatment. Biopton Light Therapy has a proven medical history of over 20 years and in Europe ranks as one of the foremost treatments for burns, wound healing, skin problems and in the treatment of sport injuries.

The human body is entirely composed of cells. Light emitted by the Biopton lamp exerts a direct influence on weakened tissue and blood cells. It uses an aspect of light that is similar to part of the spectrum produced by the sun and so uses natural processes as part of the healing.

Biopton Light Therapy may the immune system, strengthen the circulation and clean the blood, therefore a number of conditions can be helped during a single session.

Biopton Light Therapy has been used successfully to treat the following:

- ÿ Eczema, Acne and Psoriasis
 - ÿ Wrinkles, Fine Lines & Scar Reduction
 - ÿ Arthritis, Rheumatism, Gout
 - ÿ Burns and Scalds
 - ÿ Poor Circulation
 - ÿ Restless Leg Syndrome
 - ÿ Leg Ulcers
 - ÿ Sinusitis and Blocked Airways
 - ÿ Sports Injuries etc
