

The BIOPTRON medical **Hyperpolarized light** - HPL (harmonized light with perfectly ordered photons) is a unique revolutionary feature in healing light technology, introducing extraordinary molecule: **Fullerene C₆₀**.

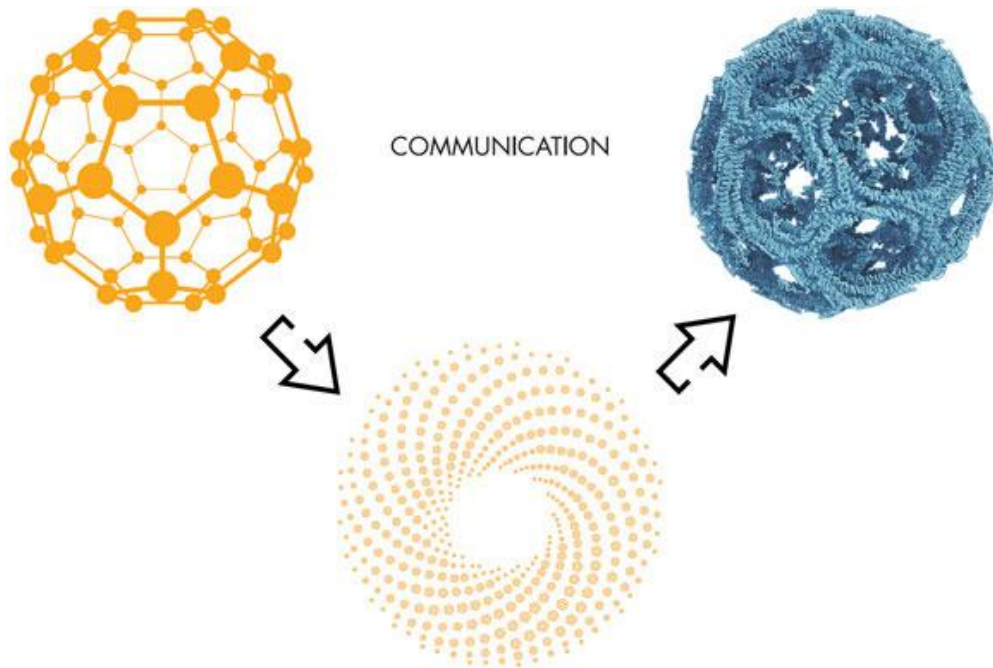

What started as an astrochemistry project with focus on analyzing the makeup of space and celestial bodies in the universe, ended up sparking a major breakthrough in carbon chemistry with the discovery of a third and unprecedented new allotropic form of elemental carbon in nature: the fascinating fullerene C₆₀ arranged in a pattern of 20 hexagons and 12 pentagons with the icosahedral symmetry (the other two forms of carbon in nature are graphite and diamond).

This serendipitous discovery of C₆₀ **awarded in 1996 with the Nobel Prize** in chemistry, triggered a new field of research introducing the world to new symmetric nanomaterials, thus opening an entirely new chapter of nanotechnology and nanomedicine: the studies led scientists and engineers to think of the multiple applications that the C₆₀ could contribute (e.g. new cancer treatments, lightweight batteries, powerful rocket fuels, just to state a few examples).

Inspired by the energetic healing properties of this fullerene molecule and understanding the biology of life, we at Zepter have created and patented a **Fullerene Nanophotonic Filter** capable of producing totally new revolutionary BIOPTRON hyperpolarized light technology. Our nanophotonic filter acts as a generator which transforms the existing BIOPTRON vertical linearly polarized light into a invented form of **ordered structured hyperharmonized light** which greatly positively influences our body.

The hyperharmonized **structured light*** interacts with **structured matter**** that shares the same properties of symmetry: HPL transfers the energetic state of ideal harmony of C₆₀ into the body inducing harmonization and equilibrium in energetically disturbed biological structures; accelerating natural healing and regenerative processes.

The often quoted saying that “nature loves symmetry” reaffirms this idea: in nature, the resonance interaction occurs if two entities possess similar symmetries; the more harmonized entity (such as HPL) will prevail and will impose its symmetry on the other entity (bio-structures); restoring the disturbed symmetry properties in biological structures and biomolecules (biomolecules absorb energy that results from the electrical and magnetic characteristics of hyperharmonized photons). In effect, under the influence of BIOPTRON hyperpolarized light, the cell is stimulated to heal itself, regaining its natural equilibrium and its energetic properties.

C_{60} = HPL TESLA TOROID = BIOSTRUCTURES

Molecule Fullerene C_{60} / HPL: perfectly ordered and harmonized light with structured photons =
 **structured matter (our body -75 % of biological structures in the human body: biomolecules and
 biostructures, water chains and clusters, clathrin, microtubules, collagen, centrioles, targets, flagella etc.) also
 possess HPL type of symmetry.*
